

AMENDMENTS TO THE SPECIFICATION

At page 1, line 2, please insert the following:

CROSS REFERENCE TO RELATED APPLICATIONS

This application is a National Stage application of international application No. PCT/CH02/000545 filed on October 1, 2002, priority from which is here claimed.

Please replace the paragraph beginning at page 3, line 30 and ending at page 4, line 4 with the following:

There are many ways to divide the coil body into two elements. One can for example think of almost any plane which intersects the coil body to divide it into two elements. However, as the coil portion of the coil body according to the invention is preferably built of the kind of a right cylinder where the base planes are perpendicular to the outer surface of the coil portion, the coil body is preferably divided into two elements by a plane which is perpendicular to a base plane of the right cylindrical coil portion. As used herein, the expression "a kind of a right cylinder" shall mean a hollow right cylinder-like body, but not necessarily circular in cross-section. For example, in the exemplary preferred embodiments of the invention described below, the coil body is more rectangular in cross-section than circular.
